Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Rose Allen on 12/13/04.

The application has been amended as follows:

Cancel claim 7.

Delete the last appearance of (Z₂) from the definition of R₄ and R₅.

Add "which is" after first group Z₂, so that the definition of R₄ and R₅ will be "R₄ and R₅ together are a group Z₂ which is -CR₁₄ (R₁₅)-CR₁₆ (R₁₇)-O-CR₁₈ (R₁₉)-C₂₀ (R₂₁)-"

Examiner's Statement of Reasons for Allowance

Claims 1-6 AND 8-12 (RE-NUMBERED AS 1-11) are allowed, after the amendments filed on November 22, 2004.

The closest prior art are World Patent WO 98/13361 (TOBLER et al.) and the *Physiology of Herbicide Action* (DEVINE et al.) and US Patent 6,221,810 (KRUGER et al.) reference.

The TOBLER et al. reference teaches the antidotes in antidotal composition for the control of grasses and weeds, especially of maize, cereals, and soybeans. The reference teaches the combinations of safeners (the antidotes) of formula I with the herbicides of formulas II-VI in various ratios. See paragraphs 2-7 on page 46. Furthermore, the reference teaches that depending on the type of the active ingredients of formulas II-VI to be formulated, various surfactants having various surface-active compounds may be selected. See the entire document, especially claims, examples, and the cited sections above.

The DEVINE et al. reference teaches the three main safeners groups and their different effects. The mode of action of safeners and broad variety of possible safener-herbicide interactions are summarized into Figure 17.9 on page 381. See the entire document, especially claims, examples, and Section 17.4 on page 376.

KRUGER reference teaches 3-hydroxyl-4-aryl-5-oxo-pyrazoline derivatives as herbicides. Furthermore, it teaches that in combating weeds, these herbicides, insecticides, acaricides, nematocides, plant nutrients etc can also be used as mixtures with known herbicides. See the entire document especially compounds of formula (I) in col 1; 1lines 1-67 in col. 33; lines 1-1-67 in col. 34; lines 1-31-in col. 35; lines 24-65 in col. 36; examples and claims.

Instant claims differ from the reference in claiming a composition of the combination of the compounds of Formula I and Formula IIa and methods of selectively controlling weeds and grasses of crops of useful plants. Furthermore, compounds of Formula Ia has also been claimed (claim 7). The results of the combination of herbicide I and safener IIa₁ are disclosed in Tables

Art Unit: 1616

B1 to B3 on pages 29 to pages 33 in the Specification, where the results of the combination of the said herbicide and safener clearly show unexpected results on various plants.

The prior does not teach nor fairly suggest the combination of the compounds of Formula I and Formula IIa and methods of selectively controlling weeds and grasses of crops of useful plants.

Examiner thanks Attorney Rose Allen for her extended cooperation during the prosecution of this application.
